WORK EXPERIENCE

Tiger Analytics

AIML Associate

Chennai

Jan 2025 - Present

- Built a production-grade **LLM-powered analytical assistant** using a multi-agent architecture to handle SQL queries, simulations, and FAQ workflows.
- Developed a **Natural Language** → **SQL** agent that converts business questions into optimized SQL queries and automatically generates insights and visualizations.
- Designed a **hybrid reasoning pipeline** to detect ambiguity and unknown entities in user queries, triggering clarification workflows and reducing incorrect executions by **30%**.
- Implemented a **document intelligence pipeline** using **Vertex AI** and structured extraction to convert lease agreements into JSON knowledge tables, processing 1000+ pages of documents.
- Built **semantic retrieval + structured data** agents to answer clause-level questions from lease contracts, improving response accuracy by **35%**

DeepEdge.ai

Machine Learning Engineer Intern

Hyderabad

Sep 2024 - Nov 2024

- Spearheaded the enhancement and optimization of a video annotation tool, contributing to its improved accuracy and efficiency in processing large datasets, critical for machine learning model training.
- Actively involved in the development of Constructor and De-Constructor models utilizing **Vision-Language Models (VLMs)**, specifically tailored for Security and Surveillance applications, to improve object detection, tracking, and event analysis.

Indian Institute of Technology Ropar

Researcher

Rupnagar

July 2023 - May 2024

- Conducted research on automated **chart data extraction and summarization** by training deep learning models on diverse chart image datasets and applying heuristic-based data preprocessing to improve extraction accuracy.
- Fine-tuned and evaluated multiple **LLM models (BART, T5, Phi-2, LLaMA2)** to generate concise and interpretable chart summaries, with a focus on accessibility for visually impaired users.
- Implemented end-to-end pipelines using **Python, TensorFlow, MMDetection, and computer vision techniques** to bridge visual data understanding and natural language generation.

Cognizant

Programmer Analyst

Kolkata

March 2021 - August 2022

- Developed and maintained high-performance web applications using Angular, Core Java, Spring Framework, and MySQL, leveraging HTML, Bootstrap, JavaScript, and JUnit to build scalable and reliable applications.

EDUCATION

IIT ROPAR

M.Tech (Artificial Intelligence)

Rupnagar, Punjab

August 2022 - May 2024

KIET Group of Institutions

B.Tech (Computer Science and Engineering)

Ghaziabad, UP

August 2017 - July 2021

PROJECTS

Chart Data Extraction and Chart Summarization

July 2023 - May 2024

Tech Stack: Python, Tensorflow, LLM models, Digital Image processing, MMDetection

- Engineered data extraction from diverse chart types by training various models on chart image datasets and implementing data preprocessing using heuristics to refine and enhance the accuracy of extracted data points.
- Streamlined the chart summarization process by fine-tuning LLM models, including BART, T5, phi2, and LLaMa2, to generate accurate and accessible summaries for visually impaired individuals.

SKILLS

Programming Languages: Core Java, Python, C++

Databases: MySQL, PostgreSQL

AI/ML: Prompt Engineering, LLMs, Semantic Search, Agentic AI, RAG, HuggingFace Transformers, Fine-tuning, TensorFlow, Scikit-learn, NLP

Cloud: AWS (S3, EC2), Google Cloud (Buckets, BigQuery, Vertex AI, Log Explorer)

Tools & Collaboration: Git, GitHub, BitBucket

COMPETITIVE PROGRAMMING

- Solved 700+ problems on LeetCode and 200+ on Codeforces
